Struct. Biol. 6:691-696(1999).
-!- FUNCTION: CAN EFFICIENTLY HYDROLYZE NONSTANDARD NUCLEOTIDES SUCH
AS XTP TO XMP OF ITP TO IMP, BUT NOT THE STANDARD NUCLEOTIDES. XTP
IS THE BEST SUBSTRATE.
-!- CAPALYIC ACTIVITY: NTP + H(2)O = NDP + phosphate.
-!- COFACTOR: Magnesium or manganese.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SEQUENCE FROM N.A.

Cornelis G., Ellis K., Grinsted J.; Sincelis G., Ellis K., Grinsted J.; Sincelis G., Ellis K., Grinsted J.; Sincelis G., Ellis K., Grinsted J.; somponent of the lactose transposon Tn951, is an example of a new category of class II transposable elements."; J. Bacteriol. 169:624-631(1997).

1. FUNCTION: RESCUVASE CATALYZES THE RESCUUTION (A SITE-SPECIFIC RECOMBINATION) OF THE COLNTERRATED REPLICON TO YIELD THE FINAL TRANSPOSITION PRODUCTS.

1. MISCELLANEOUS: TW2501 IS A CRYPTIC CLASS II TRANSPOSON FOUND AS PART OF THE LACTOSE TRANSPOSON TN951.

2. MILLARITY: Belongs to the site-specific recombinase resolvase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales;

                                                                            J. Biol. Chem. 274:18470-18476(1999).
-!- FUNCTION: RNA-editing deaminase involved in somatic hypermutation, elementarion, and class-which recombination. Required for several crucial steps of B-cell terminal differentiation necessary for efficient antibody responses.
-!- CATALYTIC ACTIVITY: Cyclaine + H(2)0 = uridine + NH(3).
-!- COFACTOR: Zinc (By similarity).
-!- COFACTOR: Zinc (By similarity).
Davidson N.O., Honjo T.; "Specific expression of activation-induced cytidine deaminase (AID), a novel member of the RNA-editing deaminase family in germinal center B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDLINE=20165948; PubMed=10701121;

The complete genome of the crenarchaeon Sulfolobus solfataricus P2.";

RA

The complete genome of the crenarchaeon Sulfolobus solfataricus P2.";

RA

The complete genome of the crenarchaeon Alfolous Solfataricus P2.";

RA

The complete genome of the produces the ammonia necessary to IGP, AICAR and glutamine to IGP and AICAR (By similarity).

CC

-I. CATALYTIC ACTIVITY: 5-[(5-phospho-1-deoxyribulos-1-

Vlamino)methyldeneamino]-1-(5-phosphoribosyl)midazole-4-

CC

-I. CATALYTIC ACTIVITY: 5-[(5-phosphoribosyl)midazole-4-

CC

-I. PATHWAY: Histidine blosynthesis; fifth step.

CC

-I. SUBLUIAR LOCATION: Cytoplasmic (By similarity).

CC

-I. SUBLUIAR LOCATION: Cytoplasmic (By similarity).

CC

-I. SIMILARITY: Contains 1 type-1 glutamine amidotransferase domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This SWISS-PROT entry is copyright. "Changes in equine endometrial retinol-binding protein RNA during the estrous cycle and early pregnancy and with exogenous steroids.";

Biol. Reprod. 52:438-443(1958).

-!- FUNCTION: Delivers retinol from the liver stores to the peripheral tissue. In plasma, the RBP-retinol complex interacts with transchyretin, this prevents its loss by filtration through the kidney glomernli.

-!- SUBCELLULAR LOCATION: Secreted.

-!- SIMILARITY: Belongs to the lipocalin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This SWISS-PROT entry is copyright. This condition causes night vision problems. It produces a typical "fundus xerophthalmicus," featuring a progressed atrophy of the retinal pigment epithelium. DISEASE: A deficiency of vitamin A blocks secretion of the binding protein posttranalationally and results in defective delivery and supply of vitamin to the epidermal cells (a condition associated with a dermatosis).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MEDLINE=99103495; PubMed=9888420; Seeliger M.W., Biesalski H.K., Wissinger B., Gollnick H., Gielen S., Frank J., Beck S., Zrenner E.; Frank J., Beck S., Zrenner E.; Phenotype in retinol deficiency due to a hereditary defect in retinol blinding protein synchesis."; Invest.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MEDLINE=96005047; PubMed=7561763; McGarvey P.B., Tousignant M., Geletka L., Cellini F., Kaper J.M.; McGarvey P.B., Tousignant M., Geletka L., Cellini F., Kaper J.M.; The complete sequence of a cucumber mosaic virus from Ixora that is deficient in the replication of satellite RNAs."; J. Gen. Virol. 76:2257-2270(1995).
-!- SIMILARITY: Belongs to the cucumoviruses/bromoviruses coat protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            IRON (HEME AXIAL LIGAND) (BY SIMILARITY).

E -> K (IN REF. 1).

A -> V (IN REF. 1).

D -> GS (IN REF. 1).

N -> H (IN REF. 1).
-!- FUNCTION: Allows the bacteria to use the host heme as an iron source. Involved in the oxidation of heme and subsequent release of iron from the heme moiety.
-!- CATALYTIC ACTIVITY: Heme + 3 AH(2) + O(2) = biliverdin + Fe(2+) + CO + 3 A + 3 H(2)0.
-!- SIMILARITY: Belongs to the heme oxygenase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Coat protein (Capsid protein) (CP).
Cucumber mosaic virus (strain Ixora) (CMV).
Viruses; ssRNA positive-strand viruses, no DNA stage; Bromoviridae;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

Virology 229:381-399(1997).
-!- FUNCTION: COULD B INACTIVE AS THE ACTIVE SITE CYSTEINE IS
MODIFIED TO TRYPTOPHAN.
-!- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)O = protein
tyrosine + phosphate.
-!- SIMILARITY: BELONGS TO THE NON-RECEPTOR CLASS OF THE PROTEIN-
TYROSINE PHOSPHATASE FAMILY: CDC14 SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

Required for the import of protein into the nucleus and also for RNA export. Involved in chromatin condensation and control of cell cycle (By similarity).
-:- SUBGNIT: Monomer.
-:- SUBGNIT: Monomer.
-:- SUBCELIULAR LOCATION: Nuclear (By similarity).
-:- SIMILARITY: Belongs to the small GTPase superfamily. Ran family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GTP-binding nuclear protein RAN/TC4.
Tetrahymena thermophila.
Bukaryota; Alveolata; Ciliophora; Oligohymenophorea; Hymenostomatida;
                                                                                                                                                                                                                                                       "V-type H+-ATPase/synthase from a thermophilic eubacterium, Thermus thermophilus. Subunit structure and operon."; J. Biol. Chem. 275:13955-13961(2000).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           "Cloning of cDNAs encoding a cell-cycle-regulatory GTP-binding low-M(r) (GBLM) protein, Ran/TC4, from micronucleated Tetrahymena thermophila and amicronucleated Tetrahymena pyriformis."; Gene 144:123-125(1994).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Reith M.E., Munholland J.; "Complete nucleotide sequence of the Porphyra purpurea chloroplast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      genome.";
Plant Mol. Biol. Rep. 13:333-335(1995).
-!- SUBUNIT: Part of the 30S ribosomal subunit.
-!- SUBCELLULAR LOCATION: Chloroplast.
-!- SUBCIELLIY: Belongs to the S3P family of ribosomal proteins.
-!- SIMILARITY: Contains 1 KH type-2 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .

Genome Res. 13:1572-1579(2003).

-I- FUNCTION: Methyltransferase required for the conversion of dimethylmenaquinone (DMKH2) to menaquinone (MKH2) (By similarity).

-I- CATALYTIC ACTIVITY: S-adenosyl-L-methionine + demethylmenaquinol = s-adenosyl-L-homocysteine + menaquinol.

-I- PATHWAY: Menaquinone blosynthesis, last step.

-I- PATHWAY: Menaquinone blosynthesis, last step.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
